1-877-369-8886

Kaizen Well Solutions strives for continuous improvements including well head lubricator safety inspections and maintenance. Kaizen has designed a well head stand and other accessories to suit any application with a safe and secure platform and adjustable ladder. Any operator or technician can conduct maintenance, inspections, plunger or spring changes on a securely mounted stand that is adjustable to many wellhead configurations.

APPLICATIONS

The Kaizen design team can easily adapt or configure the Well Head Stand to meet your specific installation. With a standard well head completion or a plunger lift lubricator the Tri Pod Well Head Stand is securely to a master valve flange with height adjustability. The Well Head Stand is designed to provide access to control valves and support operations personnel without the use of unsecured ladders or platforms.

TRI POD WELL HEAD STAND

DESIGN

- High Quality Steel material designed for long term outdoor conditions powder coated for corrosion resistance.
- Tri Pod design installed over master valve securely clamped with vertical and horizontal supports.
- For lubricator maintenance the operator can work on a solid steel platform and will avoid being in "Line Of Fire" above the lubricator top.
- Designed for a maximum 700 lb (318 kg) load.
- Ladder is height adjustable and rests on ground at 10-30 degree angle.
- Field adjustable and equipped with rail slides allowing lubricator access, plus Jib Crane Winch installation.
